Priority Applications (No Type Date): DE 1035105 A 19970813

Abstract (Basic): DE 19735105 A

NOVELTY - A Fusion protein (I) comprises: (a) an interaction domain which can bind to a binding domain; and (b) a peptide chain which has to be transported into a target cell. DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for: (1) a polypeptide comprising a binding domain, which can specifically bind to the interaction domain of (I); (2) a protein transport system comprising (I); (3) a nucleic acid construct encoding (I) and the polypeptide; and (4) a medicinal agent comprising (I) and the polypeptide.

USE - (I) is useful for the transport of polypeptides into cells.

ADVANTAGE - The components of (I) are non-toxic until they merge together in the target cell, so only target cells are killed by the transport system. (I) is non-toxic for safe handling. (I) and the polypeptide can be administered separately.
